Acknowledgment

This report was written and edited by

Prof. G.J. Alaerts
Mr. S. Veenstra
Mr. M. Bentvelsen
Mr. L.A. van Duijl

(International Institute for Hydraulic
and Environmental Engineering - Delft)

with contributions from

Mr. M. Lindfield
Mr. H. Specker

(Netherlands Economic Institute - Rotterdam)

Mr. L. van Velsen
Mr. L. Wildschut

(Haskoning Consulting Engineers - Nijmegen)

Prof. G. Lettinga
Dr. L. Hulshoff Pol
Ms. M. Zuidema

(Agricultural University Wageningen - Wageningen)

Contents

1 **Introduction** 1
1.1 Background of the study 1
1.2 Procedure and organisation of the study 1
1.2.1 Terminology 1
1.2.2 Procedure of the study 2
1.2.3 Organisation of the study 3
1.3 Waste water management in developing countries 3
1.3.1 Sanitation and public health 3
1.3.2 Urban and rural stress on the environment 4
1.4 Waste water treatment technologies 5
1.4.1 Waste water and its treatment 5
1.4.2 Waste water treatment 6

2 **Strategies and Determinants of Sanitation** 11
2.1 Introduction 11
2.2 Available technologies for human waste disposal 11
2.2.1 On-site sanitation systems 11
2.2.2 Waterborne sewerage 12
2.3 Determinants of sanitation programmes 14
2.4 Site conditions 14
2.4.1 General overview 14
2.4.2 Physical environment 14
2.4.3 Urbanisation pattern 15
2.4.4 Existing service levels 15
2.5 Environmental feasibility 17
2.5.1 Surface water protection 17
2.5.2 Ground water protection 18
2.5.3 Other environmental concerns 18
2.6 Institutional development, community involvement and socio-cultural aspects 19
2.6.1 Institutional development 19
2.6.2 Community involvement 19
2.6.3 Socio-cultural factors 20
2.7 Financial and economic aspects 21
2.7.1 Overview 21
2.7.2 Financial analysis 21
2.7.3 Economic analysis 21
2.8 A preliminary "landscape matrix" with strategies and determinants 22

3 **Anaerobic Treatment of Domestic Waste Water** 23
3.1 Introduction 23
3.2 Anaerobic microbiology 23
3.3 Anaerobic reactor types 24
3.3.1 Low-rate applications 24
3.3.2 High-rate applications 24
3.4 Principles of anaerobic sewage treatment processes 26
3.4.1 General 26

3.4.2 Removal of oxygen consuming substances 27
3.4.3 Removal of nutrients: Kjeldahl-nitrogen 28
3.4.4 Removal of suspended solids 28
3.4.5 Removal of pathogens 28
3.5 Performance of UASB reactors 29
3.5.1 UASB as on-site treatment system 29
3.5.2 UASB as off-site treatment system: the Cali pilot plant research 31
3.5.3 UASB as off-site treatment system: Bucaramanga 32
3.5.4 UASB as off-site treatment: Kanpur 32
3.6 Major conclusions and recommendations 33

Pictures 37

4 **Anaerobic Waste Water Treatment at On-site Scale** 41
4.1 Introduction 41
4.2 Approach of the study 41
4.2.1 Treatment 41
4.2.2 Effluent disposal 42
4.2.3 Scale of the facility 42
4.2.4 Developing a case study 42
4.3 On-site sanitation simulation study (case of the Indonesian kampung) 43
4.3.1 General approach 43
4.3.2 Technical description 47
4.3.3 Results 48
4.3.4 Financial and institutional aspects 53
4.4 Cost-efficiency assessment of the treatment 53
4.4.1 Oxygen consuming substances 54
4.4.2 Pathogens 54
4.5 Conclusions 54

5 **Anaerobic Waste Water Treatment at Off-site Scale** **59**
5.1 Introduction 59
5.1.1 The sewage treatment 59
5.1.2 The sewage collection 59
5.2 Criteria for selecting off-site treatment reactor types 59
5.3 Environmental feasibility 60
5.3.1 Oxygen consuming substances: BOD and COD 61
5.3.2 Kjeldahl-nitrogen 64
5.3.3 Suspended solids 65
5.3.4 Pathogens 65
5.3.5 Sludge production and handling 67
5.3.6 Odours and gases 69
5.4 Reliability 69
5.4.1 Hydraulic variations 69
5.4.2 Variation in sewage composition 70
5.5 Institutional and technical manageability 70
5.5.1 The political factor 70
5.5.2 The managerial factor 71
5.5.3 The societal factor 71
5.5.4 The scientific support factor 71
5.5.5 The technical standards factor 72
5.5.6 Management aspects 72
5.6 Economic and financial considerations 73
5.6.1 Costing procedures 73

5.6.2 Relevant cost components 74
5.6.3 Costs specific for anaerobic treatment technologies 74
5.6.4 Comparison of costs for treatment alternatives 75
5.7 Biogas: a realistic perspective? 82

6 The position of Anaerobic Treatment in Waste Water Management Schemes 85
6.1 Post-treatment options 85
6.1.1 Needs and opportunities 85
6.1.2 Simple aeration 85
6.1.3 Biological post-treatment: activated sludge, oxidation ditch 85
6.1.4 Biological post-treatment: trickling filter 86
6.1.5 Ponds 87
6.1.6 Other options 87
6.2 Anaerobic reactors in waste water management schemes 87
6.2.1 Centralised off-site option, Common sewerage 87
6.2.2 Decentralised off-site option 87
6.2.3 Centralised treatment, sewage conveyed in drains + sewer 89
6.2.4 Centralised treatment, sewage conveyed in drains 90
6.2.5 Anaerobic treatment in waste water re-use schemes 90

7 Summary and Conclusions 93
7.1 Background 93
7.2 Determinants for sanitation programme planning 93
7.3 Feasibility of anaerobic systems at on-site level 94
7.4 Feasibility of anaerobic systems at intermediate scale 95
7.5 Technical feasibility of anaerobic systems at off-site level 95
7.6 Potential use in resource recovery schemes 97
7.7 Economic/financial analysis 97
7.8 The landscape-matrix 98
7.9 Needs for further research 98
